

METHOD AND APPARATUS FOR INPUTTING SECRET INFORMATION

Abstract of the Disclosure

A method for inputting secret information by using an information processing system which comprises means for detecting events and display means, is provided. The method comprises the displaying at least two characters separately on the display means, displaying screen multi-pointers comprising at least two screen pointers separately on the screen of the display means, moving at least two screen pointers on the screen of the display means, and recording information associated with the screen multi-pointers in response to the second event detected by the detecting means.
